8. Annexure A – G .............................................. 114
PREFACE

The curriculum, with varying definitions, is said to be a plan of the teaching-learning process that students of an academic programme are required to undergo to achieve some specific objectives. It includes scheme of studies, objectives & learning outcomes, course contents, teaching methodologies and assessment/evaluation. Since knowledge in all disciplines and fields is expanding at a fast pace and new disciplines are also emerging; it is imperative that curricula be developed and revised accordingly.

University Grants Commission (UGC) was designated as the competent authority to develop, review and revise curricula beyond Class-XII vide Section 3, Sub-Section 2 (ii), Act of Parliament No. X of 1976 titled “Supervision of Curricula and Textbooks and Maintenance of Standard of Education”. With the repeal of UGC Act, the same function was assigned to the Higher Education Commission (HEC) under its Ordinance of 2002, Section 10, Sub-Section 1 (v).

In compliance with the above provisions, the Curriculum Division of HEC undertakes the revision of curricula regularly through respective National Curriculum Revision Committees (NCRCs) which consist of eminent professors and researchers of relevant fields from public and private sector universities, R&D organizations, councils, industry and civil society by seeking nominations from their organizations.

In order to impart quality education which is at par with indigenous needs and international standards, HEC NCRCs have developed unified framework/templates as guidelines for the development and revision of curricula in the disciplines of Basic Sciences, Applied Sciences, Social Sciences, Agriculture and Engineering.

It is hoped that this curriculum document, prepared by the respective NCRC’s, would serve the purpose of meeting our national, social and economic needs, and it would also provide the level of competency specified in Pakistan Qualification Framework to make it compatible with international educational standards. The curriculum is also placed on the website of HEC

http://hec.gov.pk/english/services/universities/RevisedCurricula/Pages/default.aspx

MINUTES OF FINAL MEETING OF NCRC (MECHANICAL ENGINEERING) FOR BACHELOR AND MASTERS DEGREE PROGRAMMES

The final meeting of National Curriculum Revision Committee (NCRC) in the discipline of Mechanical Engineering for Bachelor’s and Master’s Degree programmes was held from 15-17 May, 2017 (03 days) at HEC, Regional Center, Karachi. Experts from academia and industry participated in the meeting. Dr. Muhammad Idrees (Director, Academics Division, HEC, Pakistan) coordinated the NCRC meeting. The list of the participants of final meeting is as below:

<table>

List of members who attended preliminary meeting but could not attend final meeting due to their personal engagements during these dates:-

| 1 | Dr. Nasir Hayat, Professor, Department of Mechanical Engineering, University of Engineering & Technology, G. T. Road, Lahore. | Member |
| 2 | Dr. Bilal Akbar, Assistant Professor, Department of Mechanical Engineering, Mirpur University of Science & Technology, Mirpur, AJK | Member |
NCRC Agenda

The agenda of NCRC for Mechanical Engineering was as follows:

1. To revise/ finalize the Mechanical Engineering curriculum (2017) for Bachelors and Masters Degree Programmes according to indigenous needs and to bring it at par with international standards on Outcomes Based Education (OBE).
2. To revise/update preface/ preamble and rationale of the subject.
3. To develop and revise programme objectives, programme learning outcomes (PLOs), teaching methods and assessment criteria (formative & summative)
4. To incorporate/suggest latest reading materials/references (local & international) for every course.
5. To revise/finalize course contents keeping in view the uniformity across other disciplines and avoiding overlapping.
6. To make recommendations for promotion/development of the discipline, keeping in view the futuristic needs of the society and international trends.

The meeting started with recitation from the Holy Quran. Dr. Muhammad Idrees, Director, Academics Division, Higher Education Commission, Pakistan welcomed the participants. All the participants introduced themselves highlighting their qualification, experience and area of expertise within the discipline of Mechanical Engineering. Keeping with the tradition, Dr. Muhammad Idrees, offered the house to opt the Convener and Secretary of the preliminary NCRC for smooth functioning which was unanimously agreed.
Dr. Muhammad Idrees presented the agenda and objectives of the NCRC. He highlighted the importance of this meeting and emphasized for adaptation of general rules of curriculum development and revision like scope of the subject/programme, horizontal & vertical alignment, rule of flexibility and adaptability keeping in view the futuristic approach, market value/job market and societal needs. He also shared a template for revising/updating the curricula according to paradigm shift of Outcome Based Education (OBE). The template was unanimously accepted to be followed. It was also agreed to add preamble, programme objectives, programme learning outcomes, teaching methodology and assessment segments in the curricula.

On the first day, the house openly discussed the preliminary draft of the Bachelor in Mechanical engineering curriculum. Each course contents, course learning outcomes (CLOs) and their mapping with program learning outcomes (PLOs) was discussed in detail. After long deliberation, the committee finalized the nomenclature, framework/scheme of studies, the duration of the programme, number of semesters, number of weeks per semester, total number of credit hours, number of credit hours per semester, weightage of engineering and non-engineering courses and weightage of theory and practical of undergraduate 4-years programme for Mechanical Engineering. Furthermore, list of courses (core & elective) and semester wise breakup of courses were also discussed thoroughly and the same was unanimously finalized.

On second day, the courses of postgraduate programme of Mechanical Engineering were reviewed along with course outlines and text books of each course of postgraduate programme. After through discussion intake criteria, core and elective courses were finalized. It was decided that the draft curriculum of Mechanical Engineering would be circulated among the members for final review and the feedback will be incorporated on the third day.

On third day, the committee reviewed the whole draft for the last time and after minor changes were incorporated with the consent of the house. At the end, the committee also gave recommendations for further improvement.

In the end, Dr. Idrees thanked the Convener and Secretary and all members of the Committee for sparing their time and for their contribution to prepare the revised draft of the curriculum. He further stated that their efforts will go a long way in developing workable, useful and market oriented comprehensive degree programmes in Mechanical Engineering. The Convener of the NCRC also thanked the Secretary and members for their inputs in revising/updating the curriculum to make it more practical, competitive, efficient and realistic. The committee highly appreciated the efforts made by the officials of HEC Regional Centre, Karachi for making arrangements to facilitate the committee and their accommodation. The
meeting ended with the vote of thanks to HEC and Dr. Muhammad Idrees and his team from HEC for providing this academic and professional opportunity for national cause.

MISSION STATEMENT
The Mechanical Engineering Curriculum is designed to provide necessary knowledge, analytical skills, leadership abilities, critical thinking, research capabilities and ethical values to the graduates for meeting the technological challenges.

SCOPE
The scope of Mechanical Engineering Curriculum is based on existing needs of this discipline and a cushion for accommodation of courses / contents to address emerging / futuristic trends in the discipline of Mechanical Engineering. The role for Industry-Academia linkage to address problems facing industry and their indigenous solutions is also in the scope of this curriculum.

Bachelor in Mechanical Engineering

CURRICULUM AND LEARNING PROCESS
The genesis of any engineering program is the fusion of its stakeholders’ perceptions. The academic curriculum of the program is designed to facilitate / ensure the achievement of program outcomes by all students. This is achieved by offering a balanced combination of technical and non-technical contents coupled with appropriate assessment and evaluation methods. This has a well-defined core of essential subjects supported by requisite compulsory as well as elective courses. It also invokes awareness and comprehension of societal problems amongst the students and motivating them to seek solutions for improving the quality of life. The theory content of the curriculum is supplemented with appropriate experimentation / laboratory work.

The program structure is covering the essential fundamental principles at the initial stages, leading to integrated studies in the final year of the program, in consonance with the approach and levels defined in Bloom’s taxonomy, particularly in breadth & depth courses.

The hallmark of a curriculum is to infuse original thinking, resourcefulness and entrepreneurial spirits among students. This program is embodying foundation courses as well as the general and specialized professional content of adequate Breadth and Depth, including appropriate Humanities and Science components. The program scheme is designed to ensure acquisition of knowledge and skills, encouraging necessary exposure to inter-disciplinary areas.
The contents of each constituent courses of the curriculum has been updated to absorb recent technological and knowledge developments as per international practices and to meet the national needs. Efforts are also made that there should also be an effective relationship between the curricular content and practice in the field of specialization.

It is expected that the graduates are able to demonstrate professional ethics and competence in oral communication, scientific & quantitative reasoning, critical analysis, system design, logical thinking, creativity and capacity for life-long learning.

The delivery of subject matter and the assessment process employed is expected enabling the students to develop intellectual and practical skills effectively, as deemed essential in program outcomes assessment. Complex engineering problems which are not easily quantifiable, e.g. communication skills (oral / written), critical thinking, ethics, team work, etc. often require rubrics as a tool for their assessment (both in direct or indirect methods).

In addition to regular teaching / learning activities such as classroom interaction, PBL assignments, lab experimentation and faculty consultation, other aspects of student learning such as tutorial system, research / design projects, seminar / workshops and exposure to industrial practice should form an integral part of curriculum. Internal reviews of quality assurance procedures should be carried out periodically.

Program educational objectives (PEOs), Program learning outcomes (PLOs) and Course learning outcomes (CLOs) for a Bachelor in Mechanical Engineering program are given as follows.

Program Educational Objectives (PEOs)
The program offered by the institution should also have well defined program objectives. Program educational objectives (PEOs) are broad statements that describe what graduates are expected to achieve a few years after graduation. It should be ensured that the program objectives are aligned with the vision/mission of the institution. Program objectives should be articulated and made known to everyone in the institution through institutional publications and websites.

The successful pursuit and realization of the mission and objectives, and the means adopted to accomplish them bring out the quality of the institution and its programs. Program educational objectives are based on the needs of the program’s constituencies and are linked to student learning outcomes and assessment process.

The objectives should be clear, concise, realistic and measurable within the context of the committed resources. A process should be developed to assess the level of attainment of the program objectives to evaluate effectiveness of the academic programs. It should include feedback from
faculty, employers, alumni and other stakeholders. The evaluation results should be utilized for redefining/improving the program objectives.

The program must demonstrate that following are in place:

a) Well-defined and published Program Mission
b) Program’s educational objectives defined and consistent with the mission
c) Program’s educational objectives based on the stakeholder’s needs on program
d) A process in place to evaluate the attainment of educational objectives
e) Evaluation results used for continual improvement of the program

Program Learning Outcomes (PLOs)

Program outcomes are the narrower statements that describe what students are expected to have acquired, be able to demonstrate and practice by the time of graduation. These relate to the knowledge, skills and attitude that the students acquire while progressing through the program.

The program must demonstrate that by the time of graduation the students have attained a certain set of knowledge, skills and behavioral traits, at least to some acceptable minimum level. Specifically, it is to be demonstrated that the students have acquired the following graduate attributes:

The Program Learning Outcomes (PLOs) of Mechanical Engineering will cover PLO 01-12.

PLO-01: Engineering Knowledge: Ability to apply knowledge of mathematics, science and engineering fundamentals and an engineering specialization to the solution of complex engineering problems.

PLO-02: Problem Analysis: Ability to identify, formulate, research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.

PLO-03: Design/Development of Solutions: Ability to design solutions for complex engineering problems and design systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations.

PLO-04: Investigation: Ability to investigate complex engineering problems in a methodical way including literature survey, design and conduct of experiments, analysis and interpretation of experimental data, and synthesis of information to derive valid conclusions.

PLO-05: Modern Tool Usage: Ability to create, select and apply appropriate techniques, resources, and modern engineering and IT tools,
including prediction and modeling, to complex engineering activities, with an understanding of the limitations.

**PLO-06: The Engineer and Society:** Ability to apply reasoning informed by contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to professional engineering practice and solution to complex engineering problems.

**PLO-07: Environment and Sustainability:** Ability to understand the impact of professional engineering solutions in societal and environmental contexts and demonstrate knowledge of and need for sustainable development.

**PLO-08: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.

**PLO-09: Individual and Team Work:** Ability to work effectively, as an individual or in a team, on multifaceted and/or multidisciplinary settings.

**PLO-10: Communication:** Ability to communicate effectively, orally as well as in writing on complex engineering activities with the engineering community and with society at large, such as being able to comprehend and write effective reports and design documentations, make effective presentations, and give and receive clear instructions.

**PLO-11: Project Management:** Ability to demonstrate management skills and apply engineering principles to one’s own work, as a member and/or leader in a team to manage projects in a multidisciplinary environment.

**PLO-12: Lifelong Learning:** Ability to recognize importance of, and pursue lifelong learning in the broader context of innovation and technological developments.

In addition to incorporating the graduate attributes (PLO 1) to (PLO 12) listed above as the program learning outcomes, the educational institution may also include any additional outcomes if adopted. Specific details relating to the processes adopted for assessing, evaluating and reviewing the program outcomes should be provided. The institution can also present the internal quality assessment cycle adopted by its Quality Enhancement Cell (QEC).

In particular, the program must demonstrate the following:

a) Well-defined and published Program Outcomes
b) Program Outcomes linked to the Program Objectives
c) Program Outcomes encompass desired outcomes listed above
d) Mapping of Program Outcomes to Course Learning Outcomes (CLOs)
e) Teaching, learning and assessment methods are appropriate and supportive to the attainment of Course Learning Outcomes
f) Quality of assessment mechanism to evaluate achievement levels for all the Program Outcomes by each student
g) Process in place by which assessment results are applied to further refine the assessment mechanism and/or redefine the program /
course outcomes, thus leading to continuous improvement of the program

Course Learning Outcomes (CLOs)
The courses included in Mechanical Engineering program are designed according to the Course Learning Outcomes (CLOs). It necessitates that upon successful completion of the course, the student will be able to achieve knowledge, demonstrate skills and attain attitude.

RATIONALE
The Curriculum of Mechanical Engineering has vertical and horizontal alignments. The vertical alignments include placing/offering of basic and/or prerequisite courses in the initial semesters of a degree and those comprising advanced contents in the senior level semesters. The vertical alignments also address the issues of flow or linear advancement of knowledge from intermediate, undergraduate and graduate level degrees. The horizontal alignments include coherence of Mechanical Engineering with other Engineering disciplines.

Evaluation of students’ performance will be based on Bloom’s Taxonomy of Learning Domains comprising Cognitive, Affective, and Psychomotor. Evaluation scores are given below. The lab part of the course will be evaluated based on RUBRICS for Lab that will include i) Lab Reports, ii) Lab Demonstration, and iii) Viva Voce. The lab part of the course will be assessed as a total of 100 to be converted to the ratio of actual lab score for the number of specified credit hours. The following table proposes typical calculations for scores of a course.

<table>
<thead>
<tr>
<th>Activity</th>
<th>Proportional Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mid/Sessional exam</td>
<td>20%-40% of the total theory part</td>
</tr>
<tr>
<td>Quizzes, Assignments</td>
<td>10%-30% of the total theory part</td>
</tr>
<tr>
<td>Lab</td>
<td>Weightage of the lab is proportional to the credit hours of the theory and lab</td>
</tr>
<tr>
<td>Final</td>
<td>40%-60% of the total theory part</td>

ELIGIBILITY CRITERIA FOR ADMISSION
Engineering Education Regulations of Pakistan Engineering Council should be adhered to admission criteria.
**FRAMEWORK**
**BACHELORS ENGINEERING PROGRAM IN MECHANICAL ENGINEERING**

- **Duration:** 4 years
- **Number of Semesters:** 8
- **Number of weeks per semester:** 18 (16 for teaching and 2 for exams)
- **Total number of credit hours:** 130-136
- **Engineering Courses:** 65-75 per cent
- **Non-Engineering Courses:** 25-35 per cent

**Grand Total** | **108** | **28** | **136**

No. of credit hours (Non-Engineering Domain) = 38

No. of credit hours (Engineering Domain) = 98
**Bachelor in Mechanical Engineering Program**

**Course Details**

The course outlines of the Bachelor in Mechanical Engineering courses are given below as a guideline only. The course learning outcomes (CLOs) and their mapping with the program learning outcomes (PLOs) and the learning levels of each course are provided as a sample only. The universities/DAs may make changes keeping in view their strengths, vision and mission.

**Applied Physics**

**Contact Hours:**

**Practical Work**
Experiments related to concepts learned in theory classes will be conducted.

**Teaching Methodology**
- Lecturing
- Problem Solving Sessions (Tutorial, Interactive)
- Written Assignments
- Practical Experiments for Lab Work

**Assessment**
Quizzes, Assignments, Mid Exam, Final Exam

**Textbook and Reference Books**
2. Houg D. Young and Roger A. Freedman, *University Physics*, Addison-Wesley
APPLIED CHEMISTRY

Contact Hours:                                Credit Hours:
Theory        =32                                Theory      = 2.0
Practical     = 0                                Practical   = 0.0
Total         = 32                                Total       = 2.0

COURSE LEARNING OUTCOMES:

Upon successful completion of the course, the student will be able to:

<table>
<thead>
<tr>
<th>S.No</th>
<th>CLO</th>
<th>Domain</th>
<th>Taxonomy level</th>
<th>PLO</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Demonstrate working knowledge of applied chemistry and its application to mechanical engineering field.</td>
<td>Cognitive</td>
<td>3</td>
<td>1</td>
</tr>
<tr>
<td>2.</td>
<td>Identify chemical compounds with harmful effects on environment and propose their control</td>
<td>Cognitive</td>
<td>1</td>
<td>7</td>
</tr>
<tr>
<td>3.</td>
<td>Apply the acquired knowledge to identify, formulate and solve engineering problems of chemical nature in field of mechanical engineering.</td>
<td>Cognitive</td>
<td>3</td>
<td>1</td>
</tr>
</tbody>
</table>

Course outline:
- Physical Chemistry: Properties of various groups and periods of periodic table.
- **Basic Mechanical properties**: Structure of metals and ceramics.
- **Thermo-chemistry**: Chemical Thermodynamics, Hess’s Law, heat of Formation and reaction, relation between H and U, measurement of heat reaction, Bomb calorimeter
- **Electrochemistry**: Laws of electrolysis
- **Water Treatment Methods**: Water softening, treatment of water for industrial purposes.

**Teaching Methodology**
- Lecturing
- Written Assignments
- Field Visits
- Report Writing

**Assessment**
Mid Term, Presentation, Assignments, Quizzes, Report Writing, Final Term

**Text and Reference books:**
ENGINEERING DRAWING & GRAPHICS

Contact Hours:  
Theory = 16 
Practical = 48 
Total = 64  
Credit Hours:  
Theory = 1.0 
Practical = 1.0 
Total = 2.0

COURSE LEARNING OUTCOMES:
Upon successful completion of the course, the student will be able to:

<table>
<thead>
<tr>
<th>S.No</th>
<th>CLO</th>
<th>Domain</th>
<th>Taxonomy level</th>
<th>PLO</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>ACQUIRE the basic knowledge of drawing skills.</td>
<td>Cognitive</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>2.</td>
<td>APPLY the concepts of basic drawing techniques.</td>
<td>Cognitive</td>
<td>3</td>
<td>2</td>
</tr>
<tr>
<td>3.</td>
<td>DEMONSTRATE individually the drawings of plan, elevation and cross sections of machine parts</td>
<td>Psychomotor</td>
<td>3</td>
<td>3</td>
</tr>
</tbody>
</table>

Course outline:

Engineering Graphics (Theory)

1. **Orthographic Projection**  
   Principle and Methods of projection, Orthographic projection, Planes of projection, First and Third-angle projection, Reference line

2. **Projection of Points**  
   A point is situated in the first, second, third and fourth quadrant

3. **Projection of Straight Lines**  
   Line parallel and perpendicular to one or both the planes, Line contained by one or both the planes, Projections of lines inclined to both the planes, True length of a straight line and its inclinations, Methods of determining traces of a line
4. **Projection of Planes (2D)**  
Types and Traces of planes, Projections of planes, Projections of oblique planes

5. **Projections on Auxiliary Planes (2D)**  
Types of auxiliary planes and views, Projection of a point on an auxiliary plane, Projections of lines and planes

6. **Projections of Solids (3D)**  
Types of solids and their projections, Projections of solids with axes inclined

7. **Section of Solids (3D)**  
Section of planes, prisms, pyramids, cylinders, cones, spheres,  
Methods of development, Triangulation development, Developments of lateral surfaces of right solids

8. **Isometric Projections (3D)**  
Isometric axes, lines, planes, and scale, Isometric drawing or isometric view, Isometric drawing of planes or plane figures, prisms and pyramids, cylinders, cones and sphere

**Engineering Drawing (Lab):**

1. **Introduction**  
Introduction to Engineering Drawing, I. S. specification for preparation of drawings, Use of drawing instruments and materials, Basic Tools, Lines: Types, configuration and application, Selection of line thickness,

2. **Lettering, Numbering and Dimensioning**  
Vertical and inclined single stroke letters, Lettering types and rules,  
Dimension lines, projection lines, leaders or pointer lines, Arrow heads, Dimensioning,

3. **Geometric Construction**  
Drawing simple geometric objects (polygon, pentagon and hexagons etc).

4. **Orthographic Projections of different Solids**  
I-beam etc.

5. **Orthographic Projections of Machine Elements**  
Rivets, Nut and bolts, Different kinds of threads, Lap and butt joints, Flange couplings, Journal bearing, Open bearing, Footstep bearing, Crankshaft, Bearings
Practical:
- Select a machine and study its operation and machine elements detail.
- Draw the 3D model of the machine and draw 2D drawings.
- Apply the real mechanism to the machine.

Teaching Methodology
- Lecturing
- Assignments
- Drafting

Assessment:
Mid Exam, Final Exam, Quizzes, Assignments, Presentation

Text and Reference books:
1. N.D Bhatt, *Engineering Drawing and Graphics*
7. A. C Parkinson, A First Year Engineering Drawing
INTRODUCTION TO ENGINEERING

Contact Hours: 
Theory = 16 
Practical = 0 
Total = 16
Credit Hours:
Theory = 1.0 
Practical = 0.0 
Total = 1.0

COURSE LEARNING OUTCOMES:
Upon successful completion of the course, the student will be able to:

<table>
<thead>
<tr>
<th>S.No</th>
<th>CLO</th>
<th>Domain</th>
<th>Taxonomy level</th>
<th>PLO</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>ACQUIRE the knowledge of different engineering disciplines to get technological exposure</td>
<td>Cognitive</td>
<td>2</td>
<td>1</td>
</tr>
<tr>
<td>2.</td>
<td>UNDERSTAND responsibility as an engineer to work closely with society for problems identification for future actions</td>
<td>Cognitive</td>
<td>2</td>
<td>6</td>
</tr>
<tr>
<td>3.</td>
<td>ACQUIRE the knowledge for Ethical Reasoning and to take appropriate actions</td>
<td>Cognitive</td>
<td>2</td>
<td>8</td>
</tr>
</tbody>
</table>

Course outline:
1. Introduction to Engineering
   a. Evolution of engineering, steam engine, electronics etc.
   b. Effect of global wars for technology advancement
   c. Existing materials/Evolution of emerging materials
2. Difference between Engineering, Science and Technology
3. The Disciplines of Engineering
4. Engineering Design
5. Interdisciplinary Engineering (Science, Technology and Society)
6. Global Engineering and the Future (Renewable energy)
7. Problem Solving Techniques in Engineering
8. Visualization and Graphics
9. Analytical Tools for Engineers
10. Professional Ethics and Engineering Management
11. Engineering Fundamentals (Statics, Dynamics, Thermodynamics, Circuitry, Economics)
12. Future Challenges for the betterment of society

Teaching Methodology
- Lecturing
- Class discussions
- Documentaries using Audio Visual Tools
• Field Visits to visualize real world problems
• Report Writing

Assessment
Mid Term, Quizzes, Reports, Assignments, Projects, Final Exams

Text and Reference books:
1. Paul H. Wright, *Introduction to Engineering*
3. Saeed Moaveni, *Fundamentals: An Introduction to Engineering*

COMPUTER AIDED DRAWING (CAD)

<td>3</td>
</tr>
</tbody>
</table>

Course outline:
1. Introduction to CAD
2. 2D Drafting
3. 3D Modeling of Machine Elements (Part and Assembly)
4. Mechanisms and assembly

Practical:
• Select a machine and study its operation and machine elements detail.
• Draw the 3D model of the machine element and draw 2D drawings.
Teaching Methodology
• Lecturing
• Assignments
• Design Project

Assessment:
Mid Exam, Final Exam, Quizzes, Assignments, Presentation

Text and Reference books:
2. T. Jeyapoovan, Engineering Drawing and Graphics Using AutoCAD.
4. D. A. Jolhe, Engineering Drawing with an introduction to AutoCAD

Workshop Practice

</table>

Course outline:
**Fitter Shop**: Assembly/disassembly of basic mechanical components, e.g. bearings, keys, belts, etc. Basic Processes in **Wood Work Shop**: Timber, its defects and preservation methods, different types of wood joints. Basics of **Electric Shop**: Types and uses of cables. Study of household electrical appliances. Functions of Forge & Foundry Shop: Brief introduction, tools and accessories, furnace types, heat treatment furnaces. Carbon dioxide casting. **Machine Shop**: Introduction to machine tools, basic lathe operations including turning, facing, screw cutting. **Welding**: Introduction to soldering, brazing and welding, brief details of gas, and electric arc welding.

Teaching Methodology
• Demonstration
• Lab Report Writing

Assessment
Lab performance, Quizzes, Lab Report, Lab Exams, Lab Assignments
Text and Reference books:
1. Lab Manual

ENGINEERING MECHANICS-I: STATICS

</tbody>
</table>

Course outline:
1. Introduction to subject
2. Force System
   a. Introduction to Force System
3. Equilibrium
   a. Mechanical system isolation and Equilibrium condition in two dimensions
   b. Equilibrium Conditions—Equilibrium in three Dimensions
4. Structures
   a. Plane Trusses
   b. Method of joints
   c. Method of Sections and Space Trusses
   d. Frames and Machines
5. Friction
   a. Types of Friction

<td><strong>Analyze</strong> the effect of microstructure and heat treatment on end use properties/mechanical properties of materials.</td>
<td>Cognitive</td>
<td>4</td>
<td>4</td>
</tr>
<tr>
<td>5</td>
<td><strong>Differentiate</strong> the property differences between Metals, Polymers &amp; Composites and their implications in terms of environment and sustainability</td>
<td>Cognitive</td>
<td>4</td>
<td>7</td>
</tr>
</tbody>
</table>

Course Outline / Contents
1. Introduction to Materials Science and Engineering
2. Atomic Bonding
3. Structure of Crystalline Solids
4. Imperfections in Solids
5. Phase Diagrams
6. Phase Transformation and Development of Microstructures
7. Applications and Processing of Metallic Materials
8. Structure, Properties and Applications of Polymer Materials
9. Composite Materials
10. Corrosion and degradation of Materials

**Teaching Methodology**
- Lecturing
- Written Assignments

**Assessment**
Quizzes, Assignments, Mid Exam, Final Exam

**Text and Reference books:**
2. Roy A. Lindberg, *Processes And Materials of Manufacturing*

**ENGINEERING MECHANICS-II: DYNAMICS**

<tr>
<td>3</td>
<td><strong>Calculate</strong> various motion parameters related to the kinematics of rigid bodies under translation and rotation / general plane motion.</td>
<td>Cognitive</td>
<td>3</td>
<td>2</td>
</tr>
</tbody>
</table>
Course Outline
1. Introduction to subject and Basic Concepts
2. Kinematics of Particles
   a. Rectilinear Motion
   b. Plane Curvilinear Motion
   c. Space Curvilinear Motion
   d. Motion Relative to Trans Axes
   e. Constrained Motion of Connected Particles
3. Kinetics of Particles
   a. Second Law & Equation of Motion
   b. Work and Energy
   c. Linear Impulse and Momentum
   d. Impact
   e. Angular Momentum
4. Kinematics of Rigid Bodies
   a. Plane Motion
   b. Relative Velocity
   c. Relative Acceleration
5. Kinetics of Rigid Bodies
   a. Kinetics of Rigid Bodies

Teaching Methodology
- Lecturing
- Problem Solving Sessions
  - Tutorial
  - Interactive
- Written Assignments

Assessment
Quizzes, Assignments, Mid Exam, Final Exam

<td>2</td>
</tr>
<tr>
<td>3.</td>
<td>Solve problems related to bending, torsion and deflection in mechanical structures.</td>
<td>Cognitive</td>
<td>4</td>
<td>2</td>
</tr>
</tbody>
</table>

**Course outline:**
1. Mechanical properties of materials; tensile, compressive and shear stress & strain
2. Moment of inertia
3. Axial loading, Hooke’s law, stress strain relationship
4. Thermal stresses
5. Torsion of circular bars,
6. Pure bending of beams, shear stresses in beams
7. Shearing force and bending moment
8. Beam deflection using various methods
9. Residual stresses and stress concentration in various engineering applications
10. Analysis of statically indeterminate problems,
11. Thin and thick curved bars,
12. Thin walled pressure vessels.
Teaching Methodology
- Lecturing
- Written Assignments
- Report writing

Assessment
Mid Term, Report writing/Presentation, Assignments, Quizzes, Final Term

<tr>
<td>2.</td>
<td><strong>Apply</strong> energy and entropy balances to the closed and open systems.</td>
<td>Cognitive</td>
<td>3</td>
<td>1</td>
</tr>
</tbody>
</table>
Course outline:

1. **Introduction and Basic Concepts**
   a. First law of thermodynamics and its applications
   b. System and boundary
   c. Specific volume, pressure and temperature

2. **Energy, Energy Transfer, and General Energy Analysis**
   a. Equilibrium state, processes
   b. Methods to solve thermodynamics problems

3. **Properties of Pure Substances**
   a. Phase change processes, P-v-T relation
   b. Property diagrams
   c. Equation of state, specific heats
   d. Compressibility polytropic process relation.

4. **Energy Analysis of Closed Systems**
   a. Energy balance of closed system

5. **Mass and Energy Analysis of Control Volumes**
   a. Energy analysis of power, refrigeration and heat pump cycles

6. **The Second Law of Thermodynamics**
   a. Spontaneous and non-spontaneous processes
   b. Thermodynamic cycles, irreversible and reversible process, and Carnot cycle
   c. Clausius inequality.

7. **Entropy**
   a. Entropy change, T-s diagram, entropy generation
   b. Increase of entropy principle, entropy rate balance of closed systems and control volumes
   c. Isentropic efficiencies

**Teaching Methodology**
- Lecturing
- Written Assignments

**Assessment**
- Mid Exam, Final Exam, Assignments, Quizzes, Computational assignments

2. **Apply** the laws of thermodynamics to the chemical and phase equilibrium problems.  

   | Cognitive | 3 | 2 |

3. **Understand** the implications of thermodynamics power, refrigeration, and air-conditioning systems on the environmental and future sustainability.

   | Cognitive | 2 | 7 |

Course outline:

1. **Review of Thermodynamics I**
   a. Energetics
   b. Efficiency

2. **Exergy**
   a. Exergy balance
   b. Exergetic efficiency

3. **Gas Power Cycles**
   a. Air-Standard-Otto cycle
   b. Diesel cycle,
   c. Dual and Brayton cycle
   d. Regenerative gas turbines with reheat & inter cooling
   e. Combined cycles

4. **Vapor and Combined Power Cycles**
   a. Modeling and analyzing
   b. Superheat and Reheat vapor power cycles
   c. Regenerative vapor power cycles
   d. Other vapor cycle aspects

5. **Refrigeration Cycles**
   a. Vapor compression refrigeration systems
   b. Cascade and Multistage systems
   c. Absorption refrigeration, Heat pump, and Gas refrigeration systems

6. **Thermodynamic Property Relations and Gas Mixtures**
   a. Mixture composition
   b. P-v-T relations for gas mixtures

7. **Chemical Reactions**
   a. Combustion process and conservation of energy in reacting systems
   b. Importance of mathematical relations

8. **Chemical and Phase Equilibrium**
   a. Equilibrium fundamentals
b. Chemical potential and equilibrium.

**Teaching Methodology**
- Lecturing
- Written Assignments

**Assessment**
Mid Exam, Final Exam, Assignments, Quizzes, Computational Assignment

**Text and Reference books:**

**MACHINE DESIGN-I**

transmitting shafts and mechanical springs

| 3. | Present the design aspects effectively through oral presentation | Affective | 2 | 10 |

**Course outline:**

**Introduction**
1. Design philosophy
2. Types of design

**Mechanical behaviour of materials**
1. Concepts of stress and strain
2. Different types of stress and strain in a machine element
3. Stress-strain diagram
4. Actual and permissible stresses
5. Factor of safety

**Design of keys and coupling**
1. Basic concepts
2. Methodology

**Design of Riveted joint, Welded joints, Bolted joints**
1. Basic concepts
2. Methodology

**Design of Springs, Shafts**
1. Basic concepts
2. Methodology

**Metal fits and tolerances and Design Standards**
1. Basic concepts of tolerance
2. Types of fits
3. ISO standard fits charts

**Teaching Methodology**
1. Lecturing
2. Written Assignments
3. Guest Speaker
4. Report Writing and Presentation

</tbody>
</table>
Course outline:

1. **Fluid Properties**
   a. Definition of fluid and its classification
   b. Concept of continuum.
   c. Properties of the fluid.

2. **Fluid Statics**
   a. Concept of Pressure and basic equations for compressible and incompressible
   b. Pressure measurements and devices.
   c. Hydrostatics forces on plane and curved surfaces.
   d. Buoyancy and Stability.
   e. Pressure variation in fluid with rigid body motion.

3. **Fluid Kinematics**
   a. Flow characteristics, Descriptions of Velocity and acceleration field (Streamlines, streak lines and path lines).
   b. Control volume and representation of system.
   c. Reynolds transport theorem (RTT).

4. **Fluid Dynamics**
   a. Application of Newton’s 2nd law in fluids.
   b. Total, stagnation and dynamic pressure.
   c. Deriving Bernoulli equation and its applications.

5. **Integral Analysis of Fluid Flow**
   a. Continuity equation using RTT.
   b. Linear momentum equation using RTT.
   c. Moment of momentum equation using RTT.

6. **Dimensional Analysis, Similitude and Modeling**
   a. Dimensional analysis
   b. Buckingham Pi theorem and determination of Pi terms

7. **Flow in Pipes**
   a. Characteristics of pipe flow laminar and turbulent.
   b. Calculating friction factor and wall shear stresses.
   c. Solving pipe flow network problems

**Teaching Methodology**
- Lecturing
- Written Assignments
- Field Visits
- Report Writing

Course outline:
1. **Differential Analysis of Fluid Flow**
   a. Deriving continuity equation by applying conservation of mass principle.
   b. Evaluating velocity and acceleration field using material derivative.
   c. Deriving Navier-Stokes equation and some simple analytical solution
2. **Potential flow theory**
   a. Concept of vorticity, Circulation, Inviscid and Irrotational flow field
   b. Basic velocity potential function and its superposition.
   c. Prediction of Lift and drag using potential flow theory
3. **Flow over immersed bodies**
   a. Boundary layer theory and its thicknesses.
   b. Concept of local and average drag coefficient.
   c. Calculating drag and lift forces due to pressure and velocity field.
4. **Introduction to Computational Fluid Dynamics**
   a. Finite difference formulation
5. **Compressible Flows**
   a. Mach number and speed of sound
   b. Isentropic flow of an ideal gas
   c. Convergent divergent Nozzle

6. **Turbomachinery**
   a. Fans, Pumps, turbines and other flow devices.
   b. Deriving Euler's equation and solving of turbo-machine problems using velocity triangle
   c. Pump and turbine performance characteristic curves.

**Teaching Methodology**
- Lecturing

Course outline:

**Spur, Helical, Bevel and Worm Gears**
- Stress analysis on gear teeth
- Power transmission by the gears

**Design of Flywheels**
- Concepts of designing flywheels for different requirements

**Selection of bearings**
- Selection procedures of sliding contact bearings and rolling contact bearings

**Design of Brake / Clutches**
- Different types of clutches and designing concepts
- Different types of brakes and designing concepts

**Design of Power Screws / Translation Screws**
- Introduction to power / translational screws
- Stresses in power / translational screws
- Efficiency of power / translational screws
- Applications of power / translational screws

**Selection of Standard Machine Elements**
- Selection of flat belts, V belts, chain drive and rope drives

<td>3</td>
</tr>
<tr>
<td>2.</td>
<td><strong>SOLVE</strong> the real life complex engineering problems related to heat transfer.</td>
<td>Cognitive</td>
<td>3</td>
<td>2</td>
</tr>
</tbody>
</table>

**Course outline:**

1. **Introduction to Heat transfer**
   a. Review of the concepts of equilibrium, steady state, heat and thermodynamics.
   b. Basic modes of heat transfer and their mechanisms.
2. **Conduction**
   a. Deriving heat conduction equation using principle.
   c. Extended surfaces and their performance parameters.
   d. Transient heat conduction and lumped heat capacity method and its corresponding electrical analogy.
3. **Radiation**
   a. Fundamental characteristics of thermal radiation and surfaces
   b. Laws of black body radiation
   c. Intensity of radiation
   d. Solving problems of radiative heat transfer between surfaces and enclosures using equivalent electrical networks.
4. **Convection**
   a. Deriving energy equation for convection
   b. Heat transfer rate for laminar, turbulent and mixed boundary layers for external flow and internal flow problems.
   c. Buoyancy driven flows and their heat transfer rate for external flow problems and enclosed spaces.
   d. Heat transfer rate for phase change processes i.e. Boiling and condensation.
5. **Heat Exchangers**
   a. Classification and types of Heat exchangers.
   b. LMTD method
   c. NTU-effectiveness method

6. **Mass transfer**
   a. Fick’s law of diffusion and mass diffusivity.
   b. Concept of concentration boundary layer.
   c. Solving mass transfer problems using convective heat transfer analogy.

**Teaching Methodology**

<td>1</td>
</tr>
<tr>
<td>2.</td>
<td>Identify the right type of operation and its parameters for performing manufacturing processes</td>
<td>Cognitive</td>
<td>4</td>
<td>2</td>
</tr>
<tr>
<td>3.</td>
<td>Apply effectively various manufacturing techniques/operations in broad spectrum of engineering and manufacturing companies</td>
<td>Cognitive</td>
<td>3</td>
<td>2</td>
</tr>
</tbody>
</table>

**Course outline:**
1. Introduction: Basic concepts of manufacturing processes
2. Casting and Moulding: Metal casting processes and equipment, Powder metallurgy, Plastics
3. Forming: Extrusion and drawing, sheet metal forming, forming and shaping plastics and composite materials
4. Machining: Conventional and non-conventional machining processes
5. Joining: Welding, brazing, soldering, sintering, adhesive bonding, fastening, Press fitting
6. Additive Manufacturing: 3D Printing

**Lab Outline:**
Experiments related to the Manufacturing Processes will be covered in the Lab class.

**Teaching Methodology**
- Lecturing
- Written Assignments
- Report Writing
- Video lectures

**Assessment**
Mid Exam, Final Exam, Quizzes, Assignments, Presentation

**Text and Reference books:**

**Fluid Mechanics Lab**

**Contact Hours:**
- Theory = 0
- Practical = 48
- Total = 48

**Credit Hours:**
- Theory = 0.0
- Practical = 1.0
- Total = 1.0

**Course outline:**
Experiments related to the Fluid Mechanics-I & II will be covered.

**Teaching Methodology**
- Demonstration
- Lab Report Writing

**Assessment**
Lab performance, Quizzes, Lab Report, Lab Exams, Lab Assignments

**Text and Reference books:**
Lab Manual

**CONTROL ENGINEERING**

**Contact Hours:**
- Theory = 48
- Practical = 0
- Total = 48

**Credit Hours:**
- Theory = 3.0
- Practical = 0.0
- Total = 3.0

**COURSE LEARNING OUTCOMES:**
Upon successful completion of the course, the student will be able to:

<table>
<thead>
<tr>
<th>S.NO</th>
<th>CLO</th>
<th>Domain</th>
<th>Taxonomy level</th>
<th>PLO</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Develop mathematical models of different physical system.</td>
<td>Cognitive</td>
<td>5</td>
<td>3</td>

<th>2</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.</td>
<td><strong>DEVELOP</strong> a controller to achieve the desired response from the system</td>
<td>Cognitive</td>
<td>5</td>
</tr>
</tbody>
</table>

**Course outline:**

1. **Introduction**
   Basics of control system, Open-loop and closed-loop control systems, Block diagram terminology, Example of system for block diagrams, Signal flow graphs

2. **Dynamic System modeling**
   Mechanical Translational & Rotational Systems, Electrical Active & Passive Systems, Electromechanical Systems, Conversion of Electrical System to Equivalent Mechanical Systems and vice versa, Thermal system and fluid systems

3. **Laplace Transforms and Transfer Function**
   Mason Gain Formula to find transfer function, Mason’s formula application of electrical and mechanical systems, Development of nodal equations from signal flow graph, Development of signal flow graph from nodal equations

4. **State Space Formulation**
   State space formulation from differential equations, State Space formulation from block diagram and signal flow graphs, Control and Observer Canonical form of block diagrams and state space, Types of inputs like impulse, step, ramp and sinusoidal input, Solution of state space for different responses, System linearization and its applications

5. **Time Response of 1\textsuperscript{st} and 2\textsuperscript{nd} Order System**
   Time response of the 1\textsuperscript{st} and 2\textsuperscript{nd} order systems (impulse, step, ramp etc.), Time response characteristics, Frequency response of 1\textsuperscript{st} and 2\textsuperscript{nd} order systems, Time response of higher order systems

6. **Study of System Stability**
   Introduction to stability, Poles and Zeros concept, Ruth-Hurwitz stability criteria and its applications, Concept of Root-Locus

7. **Root Locus Design**
   Root Locus design, System stability by pole placement, Compensator Design (Lead and Lag Compensator), Design of PID Controller (P, PI and PID Controllers), different PID Controller
Tuning method

8. **Frequency Design**
   Introduction to frequency plots, Bode Plots, System Stability using Bode Plots

**Teaching Methodology**
- Lecturing
- Tutorial sessions
- Discussions

**Assessment**
Quizzes, OHTs/Mid Term, Assignments, Final Exam

**Text and Reference books:**

**MECHANICS OF MACHINES**

Course Learning Outcome (CLOs)
Upon successful completion of the course, the student will be able to:

<table>
<thead>
<tr>
<th>S.No</th>
<th>CLO</th>
<th>Domain</th>
<th>Taxonomy level</th>
<th>PLO</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Identify the various components of the refrigeration and air-conditioning systems by resuming the basic knowledge</td>
<td>Cognitive</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>
2. **Apply** the fundamental concepts related to design and selection of various components (Evaporator, condensers etc.) of refrigeration and HVAC systems.  
   - **Cognitive**  
   - **3**  
   - **2**  

3. **Analyze** the factors affecting thermal comfort in AC zones and air treatment/handling requirements for public buildings  
   - **Cognitive**  
   - **4**  
   - **7**  

4. **Calculate** the heating and cooling load for various structures/buildings  
   - **Cognitive**  
   - **3**  
   - **3**

**Course outline:**

1. **Pure substance properties:**
   a. Important properties of saturated and superheated vapours  
   b. Properties of liquid-vapour mixtures

2. **Refrigeration system basics:**
   a. basics of vapour compression system  
   b. Pressure-enthalpy chart  
   c. coefficient of Performance  
   d. Cycle diagrams and the simple saturated cycle  
   e. Single stage and multi-stage compression cycle  
   f. Steam jet refrigeration cycle  
   g. Air refrigeration cycle

3. **Refrigeration system analysis:**
   a. vapor absorption refrigeration cycle  
   b. Comparison of actual and theoretical refrigeration cycle  
   c. Heat pump  
   d. Types and properties of refrigerants  
   e. Condensers and evaporators  
   f. Compressors, Refrigerant flow control devices

4. **Refrigeration load estimation (Refrigeration)**
   a. Product load  
   b. Air Change load  
   c. Heat gain through walls  
   d. Internal heat gain

5. **Psychrometric properties of air:**
   a. Composition of air
b. Dalton’s Law of partial pressure
c. Dew point temperature
d. Dry bulb and wet bulb temperatures
e. Psychrometric charts
f. Heating and humidification
g. Cooling and dehumidification

6. HVAC basics,
   a. Thermal Comfort and Indoor environment Health
   b. Water and vapour mixture
   c. Air ventilation
d. Calculation of fresh air supply of a building
e. Air handling unit for untreated fresh air
f. Forced convection based air ventilator design
g. Air treatment fundamentals
h. Indoor air quality

7. HVAC systems:
   a. Essential components design of central air-conditioning plant
   b. Water chiller and water heater
c. Air handling unit
d. Chilled water and hot water recirculation system
e. All-air systems basics
f. Single zone and reheat system
g. Variable Volume
h. Dual duct and multi-zone system

8. Heating and Cooling Load:
   a. Space heating and cooling load
   b. Design conditions
c. Transmission heat losses
d. Infiltration, ventilation and other heat loss and gain sources
e. Thermal radiation
f. Solar irradiation
g. Heat gain through fenestrations
h. Design conditions
i. Internal heat gain

8. Pressure loss, Duct design and Air flow balancing

Teaching Methodology:
- Lecturing
- Written Assignments
- Field Visits
- Report Writing
Assessment:
Mid Exam, Final Exam, Quizzes, Assignments, Presentation

Text and Reference books:
2. W. F. Stoecker, *Refrigeration and Air Conditioning*
7. ASHRAE Fundamentals Handbook

Heat Transfer and HVAC Lab

</tr>
<tr>
<td>3.</td>
<td>Solve economics problems involving comparison and selection of alternatives by using variety of analytical and computational techniques.</td>
<td>Cognitive</td>
<td>3</td>
<td>5.</td>
</tr>
</tbody>
</table>

Course outline:

1. **Introduction**
   a. Engineering Costs
   b. Estimation Models & Cash Flow Diagram
   c. Life cycle cost

2. **Time value of Money**
   a. Time value of money, equivalence, use of spread sheet, simple and compound interest
   b. Uniform series & Arithmetic & geometric gradient
   c. Nominal & effective, continuous compounding Economic criteria,
   d. Present Worth, future worth and annuity

3. **Rate of Return**
   a. Minimum acceptable rate of return (MARR),
   b. Internal rate of return, External rate of return
   c. Choosing the best alternative
   d. Incremental Analysis

4. **Benefits and Cost ratio and Payback period**
   a. Benefit and cost ratio (B/C Ratio), discounted benefit and cost ratio
   b. Simple payback period, discounted payback period
   c. Sensitivity & breakeven analysis
   d. Principle of comparative advantage
5. **Depreciation**
   a. Depreciation
   b. Depreciation using Unit of Production
   c. Depreciation using straight line method
   d. Depreciation using Depletion

6. **Taxes**
   a. Income Taxes, After tax RoR

7. **Replacement analysis**
   a. Design life, salvage value
   b. Up gradation Vs replacement

8. **Risk and Uncertainty**
   a. Estimation of future events
   b. Monte Carlo Simulation
   c. Bayes theorem

9. **Concepts of Imports and Exports**
   a. Basic concepts of import and export
   b. Dumping and anti-dumping and related laws

**Teaching Methodology**
- Lecturing
- Written Assignments
- Presentation

**Assessment**
Mid Exam, Quizzes, Final Exam, Assignments, Presentations.

**Text and Reference books:**

**MECHANICAL VIBRATIONS**

</tbody>
</table>

Course outline:

1. **Introduction**
   a. Fundamentals of Vibrations, Degrees of Freedom
   b. Discrete and Continuous Systems, SHM, Vibration Analysis Procedure

2. **Single Degree of Freedom Systems - Free Vibratory Systems**
   b. Viscously Damped Free Vibration
   c. Logarithmic Decrement, Springs and dampers in Combination

   a. Forced Harmonic Vibration, Rotating Unbalance
   b. Base Excitation, Vibration Isolation, Energy Dissipation by Damping
   c. Whirling of Rotating shafts

4. **Transient Vibration**
   a. Impulse Response Function, Response to an Arbitrary Input

5. **Systems with Two Degrees of Freedom**
   a. The Normal Mode Analysis, Free Vibration Analysis of an Undamped Systems
   b. Coordinate Coupling, Free Vibration Analysis of Damped systems
   c. Forced Harmonic Vibration of an Undamped Systems
d. Forced Harmonic Vibration of Damped Systems

6. **Multi Degree of Freedom Systems**
   a. Eigen Values and Eigen Vectors, Dunkerley’s Method, Rayleigh’s Method
   b. Influence co-efficients, Matrix Iteration Method
   c. Stodola’s Method, Holzer’s Method

**Teaching Methodology**
- Lecturing
- Tutorial sessions
- Discussions

**Assessment**
Quizzes, Mid Exams, Assignments, Term Project, Final Exam

<tr>
<td>2.</td>
<td><strong>Solve</strong> numerical problems related to the design and operation of IC engines.</td>
<td>Cognitive</td>
<td>3</td>
<td>3</td>
</tr>
</tbody>
</table>
3. **Analyze** the design and operation of various IC Engine systems including preparation of air/fuel mixture, combustion control and emission reduction.  
   | Cognitive | 4 | 7 |

4. **Analyze** the effect of engine operating parameters (air/fuel ratio, ignition timing, fuel properties etc.) on engine performance and emissions.  
   | Cognitive | 4 | 4 |

**Course outline**

1. **Introduction to I.C engines:**
   a. History of I.C engine development
   b. Engine classifications
   c. Engine components and terminologies
   d. Working principle of turbo-charged, supercharged engine, its performance characteristics.

2. **SI & CI engines systems:**
   Basic engine cycle and operation
   a. Two and four stroke engines
   b. Engine operating characteristics (engine speed, compression ratio, sfc, A/F, F/A, etc)
   c. Engine parameters (efficiency, MEP, Power, torque, etc)
   d. Carburetors
   e. Fuel injectors
   f. Ignition system
   g. Electronic control unit, Engine management system
   h. Otto, Diesel and Dual cycle and their comparison

3. **Fuel and combustion:**
   a. Hydrocarbon fuels and their properties
   b. Thermochemistry and Chemical equilibrium
   c. Self-ignition and engine knock
   d. Ignition delay
   e. Octane and Cetane Numbers

4. **Gas exchange processes and mixture preparation:**
   a. Intake Manifold
   b. Volumetric efficiency
   c. Intake valves
   d. Variable valve Control
   e. Fuel injection, EFI systems (PFI, MPFI, GDI and Common-rail)
f. Super-charging and turbo-charging  
g. Fluid Motion within combustion chamber  
h. Turbulence, Swirl, Squish and Tumble  
i. Crevice Flow and blowby  

5. **Combustion in SI and CI engines:**  
a. Ignition and flame development  
b. abnormal combustion and knock  
c. Spark timing and Maximum brake torque spark timing  
d. Diesel Fuel injection and mixture preparation  
e. Phases of combustion and ignition delay  
f. Injection timing, injection pressure  
g. common rail fuel injection  

6. **Exhaust Flow:**  
a. Turbocharging  
b. Exhaust manifold  
c. Exhaust gas recirculation  

7. **Pollution control,**  
a. engine emissions  
b. pollutant formation  
c. after treatment  
d. catalytic converters  
e. soot traps  

8. **Heat Transfer in Engines** and engine cooling system  

9. **Friction and Lubrication of engine,** Lubrication systems  

**Teaching Methodology:**  
- Lecturing  
- Written Assignments  
- Video showing components and operation of IC engine  
- Assembling and dis-assembling of IC engines  
- Field Visits  
- Report Writing  

**Assessment:**  
Mid Exam, Final Exam, Quizzes, Assignments, Presentation  

**Text and Reference books:**

starting new enterprise, E-commerce, Business plan and issues, marketing strategies, franchising

2. **APPLY** knowledge for different business plans as case studies
   - Cognitive
   - 2 2

4. **DEMONSTRATE** individually and as team member during assignments, and projects for different case studies
   - Psychomotor
   - 3 3

**Course outline:**

1. Evolution of the concept of entrepreneur, Characteristics of an entrepreneur, Distinction between an entrepreneur and a Manager, Economic Development, Factors affecting entrepreneurial growth (economic, Non-Economic and Government factors)
3. Creativity and sources of new business ideas, the difference between ideas and opportunity and creativity. Assessing business opportunities in Pakistan. Screening and evaluating opportunities Product planning and development process. Creating parallel competition by developing a similar product or service, Product life cycle, finding sponsorship. Acquiring a going concern, E-Commerce and business start-up and growth.
4. Marketing as a philosophy, marketing management: Creating a marketing plan, Analyze the environmental situation and the market opportunity, Setting marketing objective, formulating a marketing strategy.
6. What is franchising? Becoming a franchisee versus starting a stand-alone business, The franchisee contract, Non-contractual
considerations of buying a franchise, Limitations of franchising, Conclusion, Course evaluation.

   - Cognitive  
   - 4  
   - 2

4. **Work** individually and as team member during assignments, and projects using software.  
   - Affective  
   - 3  
   - 9

**Course outline:**

a. **Introduction to FEA and Element Performance**
   - Introduction to Finite Element Modeling and preliminary decisions
   - Elements types and their properties
   - Basic concepts of equilibrium & compatibility
   - General factors affecting element performance – Sources of errors
   - Convergence.

b. **FE Methods, Shape Functions, Stiffness Matrix and Transformation**
   - Direct Stiffness Method, Energy Methods
   - Shape Function: Linear and Quadratic Element
   - Beam Elements, Truss Elements, Linear and Planar elements
   - Stiffness matrix, Local to Global Co-ordinate Transformation Assembly

3. **Static Structural Analysis**
   - Modeling and analysis of 1D, 2D and 3D structures under static loading

4. **Heat Transfer and Thermal Stress Analysis:**
   - Introduction to Heat transfer, Thermal and Thermal Stress analysis concepts
   - Selection of Boundary Conditions based on the identification of problem
   - Thermal Analysis (Steady State)
   - Thermal stress Analysis

5. **Dynamic Analysis**
   - Introduction to different types of dynamic analysis
   - Modal Analysis, Frequency Response Analysis, Transient Response Analysis, Master Degrees of Freedom

**Lab work (1 credit)**
FEA software based analysis may be conducted in the lab.

Course outline:

**Introduction**
Review of mass and energy balances for steady flow devices, energy sources and classification; Fossil fuels; composition, ranking and analysis; combustion calculations; environmental pollution

**Steam Generators and Turbines** Combustion equipment and firing methods, boiler types and their applications; boiler components, boiler operation and safety, water treatment. Impulse and reaction turbines; Pressure and Velocity Compounding, Turbine governing and controls

**Steam Powerplants** Rankine Cycle, Superheat, Reheat; Regenerative Cycle, Open Type Feed Water Heaters (FWH), Closed Type FWHs with Drains Cascaded Backwards and Pumped Forward

**Gas Turbine Powerplants** Gas turbine (Brayton) cycle, regeneration, intercooling

**Combined Cycle Powerplants** Topping and bottoming cycles, combined cycle efficiency

**Cogeneration** Cogeneration of power and process heat, Back Pressure and Extraction Turbines

**Diesel Engine Powerplant** General layout, Site selection criterion, performance characteristics & environmental impact consideration

**Nuclear Power Plant** Nuclear fuels, nuclear reaction types, Components, reactor types, Site selection criterion, safety and environmental considerations

**Renewable Energy Powerplants** Introduction to Solar, Wind, Hydro and Geothermal Powerplants

**Powerplant Economics and Management** Effect of variable load, load curve, economics of thermal power plants, energy conservation and management

**Teaching Methodology:**
1. Lecturing
2. Written Assignments
3. Field Visits
4. Report Writing
Assessment:
Mid Exam, Final Exam, Quizzes, Assignments, Presentation

Text and Reference books:
1. Pedersen, E.S., Nuclear Power, Ann Arbor Science
3. I. Dincer, C. Zamfirescu, Advanced Power generation systems, Elseveir
4. Larry Drbal, Pat Boston, “Powerplant Engineering”, CBS Publishers

I.C ENGINES AND POWER PLANTS LAB

Course outline:

4. **Atmospheric Pollution**: Types of Atmospheric pollution, Their Causes and Effects on Human Health, Available Technologies for Controlling Pollution.
7. **ISO Standards** for Safety and Health and Environment

Teaching Methodology
- Lecturing
- Tutorial sessions
- Discussions

Assessment
Quizzes, Mid Exams, Assignments, Term Project, Final Exam
Text and Reference books:

ELECTIVE COURSES

Some of the technical and management electives are being suggested. However, the universities/DAIs may offer any other elective course keeping in view the faculty strength and availability. Interdisciplinary courses may be taken as elective courses.

Technical Electives

1. **Renewable Energy Technology**
   Introduction to types of renewable energy, solar energy, wind energy, geothermal energy, ocean thermal energy, tidal wave and geothermal energy, biomass energy. Fuel cell and heat pump systems, energy efficiency issues and energy storage. Potential of using renewable energy resources as supplement of conventional energy resources.

   Renewable and non-renewable energies used as hybrid energy systems, Modern renewable energy plants.

   Wind energy, wind turbine design specifications, compatible electric generators and major operational issues of the wind mill for electric power generation. Wind mills design usage for pumping water.

   Biomass energy conversion methods, detailed description of biomass energy conversion plant, operational and maintenance problems and their remedies.

   **Recommended Books:**

2. **Gas Dynamics**

   **Recommended Books**
4. B.W. Imrie, *Compressible Flow*

3. Aerodynamics
Introduction, aerodynamics of incompressible flow, compressible and ideal fluid flow, aerofoil theory, finite wing aerodynamics, blade element theory and aircraft propellers, Cascade aerodynamics, jet propulsion, intake and nozzle performance, aircraft performance measurement.

**Recommended Books**
2. L. J. Clancy, Hallstead Pr., *Aerodynamics*

4. Computational Fluid Dynamics (CFD)
Types of ordinary and partial differential equations, solution of equation sets, boundary value and initial value problems, control volume approach, time stepping, accuracy, stability, consistency, linearization, diffusion, dispersion, vorticity stream function and primitive variable formulations. Turbulence modeling. Examples of external flow across various configuration, internal flows through pipes, ducts and valves.

**Recommended Books:**

5. Maintenance Engineering
Introduction and types: Preventive maintenance, its objectives, benefits and economics, inspection and implementation. Routine maintenance and monitoring of fault indicators, main concepts and implementation. Proper assembly/disassembly, alignment aspects, machine handling. Record keeping and maintenance scheduling, stocking spares and cost effectiveness, safety in maintenance. Basic repairs of electro-mechanical equipment, fault diagnosis and assessment. Introduction to predictive maintenance. Condition base monitoring. Basic Repairs. Replacement/refurbishment of defectiveness parts e.g. bearings, brakes, shafts.

**Recommended Books:**
6. **Introduction to Mechatronics**
   Sensors, transducers, transducer characteristics, sensors for measuring displacement, strain, force, pressure, temperature and motion.

   Interfacing. Ports, Input/Output, Analog to Digital converter, sampling theory, Digital to Analog converter. Sample and hold, multiplexer. Interfacing switches, LEDs, stepper motors and DC motors to microcontrollers.

   **Recommended Books:**

7. **Automation and Robotics**
   Robotics: Basic concepts in robotics, classification and structure of robotic system, drive and control system, coordinate transformation, kinematics dynamic analysis and trajectory interpolation, interfacing with micro controllers and PLCs, applications of robots.

   Programmeable logic controller (PLC). Basics components and terminologies, ladder diagram elements, relay sequencing, processor input and output modules, programming unit and programming procedures with machines or assembly language.

   Microcontroller. Basic elements of microcontroller, types of microcontroller, microprocessor and PLC, overview of architecture and principles of operations, assembly, machine and high level programming languages for microcontroller, input and output peripherals for specific application in mechanical engineering with interfacing techniques. Actuators, sensor, input signals, output signals, signal conditioning.

   Automations: Introduction to automations, automation strategies, economics of automations, partial automations, group technology and flexible manufacturing. Use of sensors and actuators in automations.

   **Recommended Books:**

8. **Tribology**
   Friction, wear mechanism, wear debris classification, surface roughness, friction and wear measurement techniques, lubrication of sliding and rolling parts. Types of lubricants, grades and their properties; theories of lubrication, oil whirl, Hydrodynamic and elasto-hydrodynamics lubrication of journal bearing. Solid lubricants, self-lubricating fuel, tribology in manufacturing, tribology in automobiles.

**Recommended Books:**
1. A Cameron, *Basic Lubrication Theory*,

9. **Nuclear Engineering**

**Recommended Books:**

10. **Mechanical Engineering Design**

**Recommended Books:**

MANAGEMENT ELECTIVES

1. Operations Management
Basics of managing manufacturing and service organizations; strategic decision making; facility location and layout; job design and work compensation; demand forecasting; capacity and material planning; scheduling in various environments; emerging trends in managing operations. Focus on selection and use of quantitative management tools after introducing fundamental concepts.

Recommended Books:

2. Total Quality Management
Fundamental principles; Standards; Techniques for quality analysis and improvements; statistical methods and SPC. Acceptance sampling; QFD; Value engineering; Cross-functional management and benchmarking; ISO-9000 application, clauses, and implementation issues

Recommended Books:

3. Project Management
Fundamental principles; Project life cycle; Project organization and human resource management; PM planning; Work breakdown structure; Estimating time and cost; Precedence relationships; Project scheduling and control techniques; Project risk analysis; Time compression and resource leveling; Computerized project management; special software packages

Recommended Books:
4. **Operations Research**
Operations research techniques and basics, Linear programming, graphical method, simplex method, geometric programming, dynamic programming, sensitivity and post-optimal analysis, transportation models, Queuing theory (weighting live models). Replacement Models. Simulation. basic principles, discrete models vs. continuous system simulation, applications, use of digital computer for simulation, languages of simulation, introduction to GPSS (General Purpose System Simulation) language, practical applications of GPSS.

**Recommended Books:**

5. **Engineering Law**
Introduction to legal studies, concepts and sources of law, basic principles of the law contract as it relates to engineers. The duty of care for engineers and the concept of negligence. Aspects of employment law. Intellectual property. Designs, patents, copyright in engineering. Enforcing rights to intellectual property.

**Recommended Books:**
1. Allen, *Business Law for Engineers*
SCHEME OF STUDIES FOR
MASTER IN MECHANICAL ENGINEERING

Admission/Intake Criterion
- Bachelor in the relevant Engineering disciplines accredited by the Pakistan Engineering Council.

Degree Requirements
- Option 1: Minimum 30 Credit hours course work.
- Option 2: Minimum 24 Credit hours course work and 6 credit hours thesis.
- List of Master/PhD. courses is presented.
- In any specialization, the concerned departments may select a course(s) available in the above list to serve a core course(s) (minimum 4 courses).
- Any new course added/launched/included by a university may be routed through the statutory bodies to the (NCRC) at HEC for inclusion in the existing list.
- The above recommendations may be forwarded to the MS/Ph.D. monitoring committee of HEC.

</table>
COURSE OUTLINE FOR MASTERS IN MECHANICAL ENGINEERING

Continuum Mechanics

Course Outline

Recommended Books
1. *Introduction to the Mechanics of a Continuous Medium* L. E. Malvern Prentice Hall.

Advanced Fluid Mechanics

Course Outline

Recommended Books

Advanced Heat Transfer

Course Outline
An advanced study of the transmission of heat by conduction, convection and radiation. Conduction and convection: derivation and application of
their equations governing steady and unsteady conduction heat transfer, transient conduction, and numerical solutions are examined with selected topics. Governing equations for forced and natural convection; dimensional analysis and similarity transforms are applied. Radiation: physical properties of radiation, thermal radiation laws, characteristics of real and ideal systems, geometric shape factors, grey and non-grey system analysis, energy transfer in absorbing media and luminous gases, solar radiation.

**Recommended Texts**

---

**Advanced Thermodynamics**

**Course Outline**

Equilibrium of thermodynamics systems: spontaneous changes, criterion of stability, equilibrium of system. System of constant chemical composition: thermodynamic properties, equation of state, law of corresponding states, relations for pure substance, the third law of thermodynamics, Gibbs free energy equation, heats of reaction or calorific values, adiabatic combustion, heats of formation and Hess’s law, entropy of ideal gas mixtures. Gas mixtures of variable composition: chemical potential, stoichiometry and dissociation, chemical equilibrium, equilibrium constant and heat of reaction, Van’t Hoff’s equation, temperature rise due to combustion reaction, Lighthill ideal dissociating gas, ionization of monatomic gases, non-equilibrium processes, equilibrium and frozen flows, Special systems: application of thermodynamics to elastic systems, systems with surface tension, reversible cell, fuel cell, magnetic systems, thermodynamics of irreversible processes, thermo-electricity.

**Recommended Texts**
Advanced Stress Analysis

Course Outline
Overview of Experimental Stress Analysis, Stress analysis – Analytical, Numerical and Experimental approaches, Specific domain of these approaches, Advantages and disadvantages. Theory and applications of methods in experimental mechanics for measuring static and dynamic deformation of 2-D and 3-D models and bending of plates and shells. Techniques of electric resistance strain gage, photoelasticity, moire, holographic interferometry, laser speckle interferometry, moire interferometry, caustics, optical correlation by computer vision. Introduction to Three-Dimensional Photoelasticity and Digital Photoelasticity. Applications to problems in fracture mechanics, composite mechanics, interface mechanics and micromechanics.

Recommended Texts

Advanced Manufacturing Processes

Course Outline
Fundamentals and advanced techniques related to manufacturing processes. Applied aspects of manufacturing processes, a sound analytical basis for some of the processes will be taught. Through the use of analytical approaches you will learn how to control a manufacturing process for optimal production. This course builds a foundation of capability for the solution, analysis and synthesis of a wide variety of manufacturing problems.

Recommended Texts
Advanced Product Design

Course Outline

Recommended Texts
1. O. Molloy, S. Tilley, E. Warman, Design for Manufacturing and Assembly, Concepts, architectures and implementation.
2. Geoffrey Boothroyd, Peter Dewhurst and Winston A. Knight, Product Design for Manufacture and Assembly.

Advanced Finite Element Methods

Course Outline:

Recommended Texts

Design Optimization and Analysis Techniques

Course Outline
space. Mathematical review. Notation. Multi-variable functions. Continuity
gradient and definite matrices. Convergence of algorithms. Conditions of
optimality: necessary and sufficient conditions for unconstrained and
constrained optima. Meeting of LaGrange multipliers. Methods of
unconstrained optima. One dimensional minimization. Bisecion and
golden section initial bracketing. Polynomial interpolation. Multi-
dimensional minimization. Steepest descent. Conjugate direction &
constrained optima. Interior and exterior penalty method. Augmented
lagrangian method. Direct methods.

Recommended Books
1. *Principles of Optimal Design* by Papalambros & Press, USA. Wilde,
   McGraw-Hill

Design of Experiments

Course Outline
Review of Statistics and Probability, Probability Distributions, Sampling
Distributions, Design of Experiments, Single and Multi-Factor Analysis of
Variance (ANOVA), Factorial Design of Experiments, $2^k$ and $3^k$ designs,
$2^k$ designs with Center Points, Response Surface Methodology, Simple
and Multiple Regression

Recommended Books
1. Jiju Antony, *Design of Experiments for Engineers and Scientists*,

System Dynamics and Controls

Course Outline
Introduction to Process Control; Process Dynamics and Laplace
Transform; First Order Systems; Second Order Systems; Inverse
Response and Time Delay; Frequency Domain; Linearization and
Nonlinear Systems; Stability; Process Identification; Feedback Control
Systems; Conventional Design; Inverse Response and Time Delay; Feed
forward, Inverse Response, and Time Delay; Model-based Control; Digital
Control - Sampling; Z Transforms and Digital Block Diagrams; Digital
Controller Design; Model Predictive Control; Multivariable Control; RGA
and Modal Analysis; SVD and Decoupling; Multivariable Examples.

Recommended Books
1. Smith, C. A, Corripio, A. B, *Principles and Practice of Automatic
   Process Control*, John Wiley.

95
Advanced Solid Mechanics

Course Outline
Review of mechanics of materials, Stress transformations, general 3D stress state, Mohr’s circle in 3D, strain transformations, generalized stress-strain relationship, equilibrium and compatibility, introductory topics from theory of elasticity, Airy stress functions, Prandtl's stress functions for torsion, shear flow, torsion of thin-walled tubes, bending of unsymmetrical beams: stress & deflection, transverse shear, composite beams in bending, curved beams, bending of thin flat plates, axisymmetric circular plates in bending, thick-walled cylinders & rotating disks, contact stresses, distributed contact surfaces, contact between curved surfaces. Energy techniques.

Recommended Books

Theory of Plates and Shells

Course Outline
Preliminaries of linear, three-dimensional elasticity theory, Reduction of the elasticity theory to theories of plates and shells, Anisotropy, Nonlinear theories, Effects of discontinuities on the stress distribution in plates and shells, Design construction features of plates and shells, Applications.

Recommended Books

Condition Monitoring of Rotating Machines

Course Outline
Introduction to vibration technology, Vibration, causes and its effects on machine life, Maintenance philosophies, condition monitoring technologies, Vibration as a predictive maintenance tool, Components of
Vibration Analysis (VA) Program and its additional applications, components of a mechanical system, free(without and with damping) and forced (without and with damping) single, two and multiple degree of freedom system, characteristic of Vibration including amplitude, frequency and phase analysis with their significance in VA, Vibration Severity Standards and guidelines, setting of machine alarms, bearing and gears fault diagnosis techniques like spike energy and Peak Value, vibration transducers including displacement probes, velocity pickups and accelerometers, their construction, selection and mounting techniques, Vibration frequency analyzers, FFT spectrum analysis, spectral parameters of FFT, directional and non-directional vibrations, identification of most common machinery problems using FFT spectrum like unbalance, misalignment, looseness, resonance, aerodynamic/hydraulic problems of pumps and fans, bearing and gear problems, drive belt problems, rotor and stator problems in electric motor, eccentricity and bent shaft problems, general consideration and pitfalls, implementation of a successful predictive maintenance program.

**Recommended Books**

2. M. L. Adams Jr., *Rotating machinery problem from analysis to Troubleshooting*, Marcel Dekker Inc

**Computational Fluid Dynamics**

**Course Outline**

Recommended Books

Turbulence Modelling

Course Outline

Recommended Books

Fracture Mechanics

Course Outline
Recommended Books

Advanced Numerical Analysis

Course Outline

Recommended Books

Information Systems Analysis and Design

Course Outline
The concepts, strategies, techniques, and tools for identifying and specifying information systems requirements and for developing designs.

Recommended Books
3. V. Rajaraman, *Analysis and Design of Information Systems*

Mechanics of Composite Materials

Course Outline
Definition and classification, natural composites, property enhancement by reinforcement and orientation, matrix interface, Constitutive relations for anisotropic materials; Stiffness and compliance matrices of lamina; Effective moduli of lamina; Macro-mechanical behavior of cross-ply and angle-ply laminates; Interlaminar strength; Symmetric and anti-symmetric laminates; Failure theories for lamina and laminate; Micromechanics of single-fiber-composite; Statistical aspects of fiber strength; Viscous and dynamic behavior.
Recommended Books
3. Ramesh Talreja and Jan-Anders E. Manson; *Polymer Matrix Composites*, Elsevier.

Supply Chain Management in Engineering

Course Outline
Defining supply chain systems complexity, opportunities, and pit-falls of management inventory theories, transportation and supply chain dynamics. The organizational models to develop, implement and sustain supplier management.

Recommended Books
1. Samuel H. Huang, *Supply Chain Management for Engineers*
3. Dolgui, Alexandre, Proth and Jean-Marie, *Supply Chain Engineering Useful Methods and Techniques*

Corrosion Engineering

Course Outline
Applications of thermodynamics and kinetics to engineering aspects of corrosion and corrosion control; introduction to forms and mechanisms of corrosion; applications of cathodic protection, anodic protection, corrosion inhibitors, coatings and materials selection for corrosion control and design.
Recommended Books
1. Pierre R. Roberge, *Handbook of Corrosion Engineering*

Advanced Aerodynamics

Course Outline
Introduction, Fundamental principles and equations, Circulation, Stream function, Velocity Potential, Dynamics of incompressible inviscid flow-field, Characteristic parameters for airfoil and wing aerodynamics, Airfoil nomenclature, Incompressible flow around airfoils, Incompressible flow about wings, Boundary layer flows, Boundary layer equations for incompressible flows, 2D incompressible laminar flows, 2D incompressible turbulent flows, Boundary layer Separation phenomena in laminar flows, Interactive boundary layer theory, Experimental external flows

Recommended Books
5. Young, A. D., *Boundary Layers*, AIAA.

Transport Processes in Energy Systems

Course Outline
Transport processes from a multiscale and Multiphysics perspective, and the application to the analysis of energy engineering systems. The equations describing the mechanisms for mass, momentum, charge, and energy transport. Approaches for the evaluation of material properties and constitutive relations holistic view of transport processes as combinations of transient, advective, diffusive, and reactive phenomena. Applications associated to energy generation.

Recommended Books
2. Mamoru Ishii, Takashi Hibiki, *Thermo-Fluid Dynamics of Two-Phase Flow*.
Advance Fatigue Fracture Analysis

Course Outline
Fatigue behaviour of materials, structural damage assessment, fracture design and failure analysis for monotonic and cyclic loaded components, the stress intensity factor and J integral for monotonic and cyclic loading, fatigue and fracture data statistical analysis, practical case studies and applications, fatigue crack initiation, crack growth rate, and fatigue life prediction of both un-notched and notched engineering components subjected to the uniaxial and multiaxial fatigue loading conditions.

Recommended Books
2. Dieter Radaj, Michael Vormwald, Advanced Methods of Fatigue Assessment.

Microelectromechanical Systems

Course Outline

Recommended Books
Casting and Solidification of Materials

Course Outline

Recommended Books
1. Kuang-Oscar Yu (Editor) *Modeling for Casting and Solidification Processing (Materials Engineering)*
2. Brian Cantor, K O'Reilly, *Solidification and Casting: (Materials Science and Engineering).*
3. Hasse Fredriksson, Ulla Åkerlind, *Materials Processing During Casting*

Operations Research

Course Outline
Formulation and analysis of probabilistic models in operations research. Poisson processes, renewal processes, Markov chains, queuing theory, Markovian decision processes, and time series analysis. Application areas reliability, traffic flows, production, and inventory.

Recommended Books
1. C. Richard Cassady, Joel A. Nachlas, *Probability Models in Operations Research*

Advanced Transport Phenomena

Course Outline
Momentum Transport: Derivation of equation of continuity and motion; Application to laminar flow problems. Energy Transport: Derivation of energy equation; Application to heat Transfer Problems involving conduction, forced and free convection. Mass Transport: Derivation of species conservation equations for binary and multi-component mixtures; Application to mass transfer problems with and without chemical reactions.
Recommended Books

Processing of Composites

Course Outline
Definition and classification, natural composites, property enhancement by reinforcement and orientation, matrix interface, Constitutive relations for anisotropic materials; Stiffness and compliance matrices of lamina; Effective moduli of lamina; Macro-mechanical behavior of cross-ply and angle-ply laminates; Interlaminar strength; Symmetric and anti-symmetric laminates; Failure theories for lamina and laminate; Micromechanics of single-fiber-composite; Statistical aspects of fiber strength; Viscous and dynamic behavior.

Recommended Books
3. RameshTalreja and Jan-Anders E. Manson; Polymer Matrix Composites, Elsevier.

Materials for High Temperature Applications

Course Outline
Introduction and Elevated temperature characteristics of engineering materials, Corrosion at elevated temperatures, High temperature creep, thermal and thermomechanical fatigue of structural alloys, Elevated temperature crack growth and creep-fatigue interaction, Elevated temperature mechanical characteristics of carbon alloy steels and Stainless steels, Elevated temperature corrosion properties of carbon
alloy steels and Stainless steels, Elevated temperature mechanical and corrosion properties of high alloy cast steels, Super-alloys: their processing, high temperature mechanical properties, corrosion behavior, microstructural degradation behavior of super alloys, Titanium and titanium alloys, Refractory metals, alloys and Structural inter-metallic.

**Recommended Books**
1. M. N. Rahman, Marcel Dekker, *Ceramic Processing and Sintering*

**Advanced Turbomachinery**

**Course Outline**
Principle of operation of gas turbines, work done and pressure rise, diffuser, compressibility effects, non-dimensional quantities for plotting compressor characteristics, computerized design procedures, factors affecting stage pressure ratio, degree of reaction, 3D flow, design process, blade design, calculation of stage performance, vortex theory, choice of blade profile, pitch and chord, blade cooling, radial flow turbine, off design performance of single shaft gas turbine, free turbine engine and jet engine, incorporation of variable pressure losses, prediction of performance of turbo-machinery.

**Recommended Books**

**Welding & Non-destructive Testing**

**Course Outline**
Applications of Ultrasonic Inspection, Eddy current inspection.

**Recommended Books**

**Advanced Power Plant Systems**

**Course Outline**
Layout of thermal power plants; Containment buildings; Primary containment vessels; Structure of reactor core; and mechanical stress in various structures. Description and analysis of power plant systems and components including steam generator, steam dryer and separator, pressurizer, reheater, heat exchanger, condenser, demineralizer, pumps, turbine, generator, cooling tower; Auxiliary cooling systems. Fuel handling mechanisms; Control and mechanisms; Radiation waste systems; Electrical Systems; Reactor grid interface and load following. Basic considerations in nuclear plant design; Components of nuclear power cost; Economic comparison of nuclear and fossil fuelled plants; Dual and multipurpose nuclear power plants; Future trends in nuclear power cost.

**Recommended Books**

**Project Management**

**Course Outline**
Introduction to project management, Strategic relevance of project management, Project Management in the organizational context, How projects come into being, Project selection techniques and project portfolios, Project initiation, Project planning, Project implementation, Project monitoring and control, Project leadership, communication and teamwork, Performance Monitoring and Evaluation, Cultural issues in project management, Case studies of project management, Application of Microsoft Project/ Primavera

**Recommended Books**
1. Gray, Clifford F., Larson, Erik, W., *Project Management: The
Managerial Process, McGraw Hill.

Renewable Energy Systems

Course Outline
Solar irradiation, its nature and measurement, Insulation on tiled surfaces, Application of the principle of heat transfer and thermodynamics to the theoretical and experimental analysis of solar energy components used in the heating and cooling of buildings as well as hot water heating devices. Theoretical consideration of thermal storage devices, solar collectors and solar-augmented heat pumps. Approximate techniques and other research topics. Renewable and non-renewable energies used as hybrid energy systems, modern renewable energy plants. Wind energy, wind turbine design specifications, compatible electric generators and major operational, wind mills design usage for pumping water. Biomass energy conversion methods, detailed description of synthetic gas, biodiesel, biomass and biogas, operational and maintenance problems and their remedies.

Recommended Books

Advanced Measurements and Instrumentation

Course Outline
General measurement system, Static and dynamic characteristics of
measurements systems, Error analysis, Loading effects and two port network modeling, Signal and noise in measurement systems, Reliability analysis, Transducer elements, Motion measurement and seismic analysis, Force measurement, Pressure measurement, Temperature measurement, Flow measurement, Torque and shaft power measurement, Transducer interfacing.

**Recommended Books**

**Robotics and Parallel Mechanisms**

**Course Outline**

**Recommended Books**

**Hydrogen and Fuel Cell Engineering**

**Course Outline**

**Recommended Books**

**Combustion and Environment**

**Course Outline**

Recommended Books
1. *Combustion and Incineration Processes*, Walter R. Niessen

Theory of Plasticity

Course Outline
Stress strain curve, General theorems, Solution of plastic-elastic problems, Plane plastic-strain and theory of the slip-line field, Two-dimensional problems of steady motion, Non-steady motion problems in two dimensions.

Recommended Text

Theory of Elasticity

Course Outline
Review of concepts of stress & strain, Index notation, Plane stress and plane strain, problems in rectangular coordinates and polar coordinates, Two dimensional problems in curvilinear coordinates, Analysis of stress and strain in three dimensions, General theorems, Elementary problems of elasticity in three dimensions, Torsion, Bending of bar, Thermal stress, Application of finite difference equation in elasticity

Recommended Texts

Reliability and Quality Engineering

Course Outline
Reliability Measures: The reliability Function; Expected Life; Failure Rate and Hazard Function; Reliability and Hazard Function for distributions

Recommended Books
Recommendations by NCRC

The following recommendations must be forwarded to the all concerned policy making divisions of HEC.

1. It is proposed to change eligibility criteria for admission in PhD from CGPA 3.0 to 2.75 in Master.
2. The previous policy of HEC needs to be resumed to allow the students having less than the required CGPA may improve CGPA for the purpose of admission in PhD only, through continuing mode.
3. Maximum time duration for completion of Master degree may be extended to 5 years.
4. Universities may be encouraged to compensate their faculty members for teaching Master/PhD courses.
5. For B. Tech Hons/ BS Technology applicants for Masters in Engineering, the minimum requirement proposed is to complete credit hours equivalent to two semesters of undergraduate courses plus final year project as recommended by the departmental committee determining deficiency courses. This recommendation may be forwarded to the relevant HEC and PEC committees.
6. In case, a new scenario is developed on the scientific, technological or social front of the country, the NCRC may be called within six (6) months.
7. HEC quality assurance member must be present at least in the final meeting of NCRC.
8. HEC may ensure the feedback from concerned institute on the revised curriculum every two years.
9. The decision-making departments of HEC are recommended to consult the concerned academicians and working professors especially in academics related policies and decisions.
10. Community services may be part of the curriculum (at least 48 hours) with non-credits.
11. Teaching duration per semester must be within 15-16 weeks.
12. Mandatory industrial training/internships (non-credit) must be of 6-8 weeks.
13. All official notifications containing academic decisions by HEC must be made available online.
14. Humanities, natural sciences and social sciences curriculum experts may please be invited in NCRC meeting in formulating the non-engineering domain of the curriculum.
15. NCRC recommends adopting option 3 for degree requirement of Master in Mechanical Engineering, i.e. Minimum 21 Credit hours’ course work and 9 credit hours thesis with one journal paper publication in HEC recognized journal (W category minimum).
16. The universities may have same level of MS and PhD courses.
17. Provisional PhD admission may be allowed for one year without qualifying GAT-subject test/Admission test/equivalent.
English I (Functional English)

Objectives: Enhance language skills and develop critical thinking.

Course Contents
Basics of Grammar
Parts of speech and use of articles
Sentence structure, active and passive voice
Practice in unified sentence
Analysis of phrase, clause and sentence structure
Transitive and intransitive verbs
Punctuation and spelling

Comprehension
Answers to questions on a given text

Discussion
General topics and every-day conversation (topics for discussion to be at the discretion of the teacher keeping in view the level of students)

Listening
To be improved by showing documentaries/films carefully selected by subject teachers

Translation skills
Urdu to English

Paragraph writing
Topics to be chosen at the discretion of the teacher
Presentation skills

Introduction

Note: Extensive reading is required for vocabulary building

Recommended Books

1. Functional English
   a) Grammar
   b) Writing
   c) Reading/Comprehension
   d) Speaking

   English II (Communication Skills)

   Objectives: Enable the students to meet their real life communication needs.

   Course Contents:

   Paragraph writing

   Practice in writing a good, unified and coherent paragraph
Essay writing
Introduction

CV and job application
Translation skills
Urdu to English

Study skills
Skimming and scanning, intensive and extensive, and speed reading, summary and précis writing and comprehension

Academic skills
Letter/memo writing, minutes of meetings, use of library and internet

Presentation skills
Personality development (emphasis on content, style and pronunciation)

Note: documentaries to be shown for discussion and review

Recommended Books

Communication Skills

a) Grammar

b) Writing

c) Reading

2. Reading and Study Skills by John Langan

**English III (Technical Writing and Presentation Skills)**

**Objectives:** Enhance language skills and develop critical thinking

**Course Contents**

**Presentation skills**

**Essay writing**

Descriptive, narrative, discursive, argumentative

**Academic writing**

How to write a proposal for research paper/term paper

How to write a research paper/term paper (emphasis on style, content, language, form, clarity, consistency)

**Technical Report writing**

**Progress report writing**

*Note: Extensive reading is required for vocabulary building*

**Recommended Books**

Technical Writing and Presentation Skills

a) Essay Writing and Academic Writing

(particularly suitable for discursive, descriptive, argumentative and report writing).

b) Presentation Skills

c) Reading

The Mercury Reader. A Custom Publication. Compiled by Northern Illinois University. General Editors: Janice Neulib; Kathleen Shine Cain; Stephen Ruffus and Maurice Scharton. (A reader which will give students exposure to the best of twentieth century literature, without taxing the taste of engineering students).
Pakistan Studies (Compulsory)

Introduction/Objectives

- Develop vision of historical perspective, government, politics, contemporary Pakistan, ideological background of Pakistan.
- Study the process of governance, national development, issues arising in the modern age and posing challenges to Pakistan.

Course Outline

1. **Historical Perspective**
   b. Factors leading to Muslim separatism
   c. People and Land
      i. Indus Civilization
      ii. Muslim advent
      iii. Location and geo-physical features.

2. **Government and Politics in Pakistan**
   Political and constitutional phases:
   a. 1947-58
   b. 1958-71
   c. 1971-77
   d. 1977-88
   e. 1988-99
   f. 1999 onward

3. **Contemporary Pakistan**
   a. Economic institutions and issues
   b. Society and social structure
   c. Ethnicity
   d. Foreign policy of Pakistan and challenges
   e. Futuristic outlook of Pakistan
Recommended Books

ISLAMIC STUDIES
(Compulsory)

Objectives

This course is aimed at:

1. To provide Basic information about Islamic Studies
2. To enhance understanding of the students regarding Islamic Civilization
3. To improve Students skill to perform prayers and other worships
4. To enhance the skill of the students for understanding of issues related to faith and religious life.

Detail of Courses

Introduction to Quranic Studies

1. Basic Concepts of Quran
2. History of Quran
3. Uloom-ul-Quran

Study of Selected Text of Holly Quran

1. Verses of Surah Al-Baqara Related to Faith (Verse No. 284-286)
2. Verses of Surah Al-Hujrat Related to Adab Al-Nabi (Verse No. 1-18)
3. Verses of Surah Al-Mumanoon Related to Characteristics of faithful (Verse No. 1-11)
4. Verses of Surah al-Furqan Related to Social Ethics (Verse No. 63-77)
5. Verses of Surah Al-Inam Related to Ihkam (Verse No. 152-154)

Study of Selected Text of Holly Quran

1. Verses of Surah Al-Ihzab Related to Adab al-Nabi (Verse No. 6, 21, 40, 56, 57, 58.)
2. Verses of Surah Al-Hashar (18, 19, 20) Related to thinking, Day of Judgment
3. Verses of Surah Al-Saf Related to Tafakar, Tadabar (Verse No-1,14)

Seerat of Holy Prophet (S.A.W) I
1. Life of Muhammad Bin Abdullah (Before Prophet Hood)
2. Life of Holy Prophet (S.A.W) in Makkah
3. Important Lessons Derived from the life of Holy Prophet in Makkah

Seerat of Holy Prophet (S.A.W) II
1. Life of Holy Prophet (S.A.W) in Madina
2. Important Events of Life Holy Prophet in Madina
3. Important Lessons Derived from the life of Holy Prophet in Madina

Introduction to Sunnah
1. Basic Concepts of Hadith
2. History of Hadith
3. Kinds of Hadith
4. Uloom–ul-Hadith
5. Sunnah & Hadith
6. Legal Position of Sunnah

Selected Study from Text of Hadith

Introduction to Islamic Law & Jurisprudence
1. Basic Concepts of Islamic Law & Jurisprudence
2. History & Importance of Islamic Law & Jurisprudence
3. Sources of Islamic Law & Jurisprudence
4. Nature of Differences in Islamic Law
5. Islam and Sectarianism

Islamic Culture & Civilization
1. Basic Concepts of Islamic Culture & Civilization
2. Historical Development of Islamic Culture & Civilization
3. Characteristics of Islamic Culture & Civilization
4. Islamic Culture & Civilization and Contemporary Issues
Islam & Science
1. Basic Concepts of Islam & Science
2. Contributions of Muslims in the Development of Science
3. Quran & Science

Islamic Economic System
1. Basic Concepts of Islamic Economic System
2. Means of Distribution of wealth in Islamic Economics
3. Islamic Concept of Riba
4. Islamic Ways of Trade & Commerce

Political System of Islam
1. Basic Concepts of Islamic Political System
2. Islamic Concept of Sovereignty
3. Basic Institutions of Govt. in Islam

Islamic History
1. Period of Khlaft-E-Rashida
2. Period of Ummayyads
3. Period of Abbasids

Social System of Islam
1. Basic Concepts of Social System of Islam
2. Elements of Family
3. Ethical Values of Islam

Reference Books
1. Hameed ullah Muhammad, “Emergence of Islam”, IRI, Islamabad
2. Hameed ullah Muhammad, “Muslim Conduct of State”
3. Hameed ullah Muhammad, “Introduction to Islam”
4. Mulana Muhammad Yousaf Islahi,”

ANNEXURE – D

Calculus I

Course Outline:
Functions of one variable, limits and continuity, differentiation of functions of one variable, properties of differentiable functions, differentials and linear approximation, maxima minima & curvature, applied optimization problems of functions of one variable, indefinite integrals and techniques of integration, definite integrals and fundamental theorem of calculus, applications of definite integrals, polar coordinates and polar curves, parametric functions and curves, conic sections and their parametric representations, properties of famous plane curves, algebra of complex numbers and some applications of complex numbers.

Recommended Text:

Calculus II

Course Outline:
Infinite sequences and series, convergence of infinite sequences and series, general properties of convergent sequences and series, tests of convergence, power series, Taylor's series, analytical geometry of three dimensions, planes and straight lines in space, quadric surfaces, functions of several variables, continuity of functions of several variables, partial derivatives and partial differentials, chain rule, directional derivatives and gradient, extreme values, Lagrange multipliers, applied optimization problems, double and triple integrals and their evaluation, cylindrical and spherical coordinates, applications of double and triple integrals, vector calculus including line and surface integrals and theorems of Green, Gauss and Stokes.

Recommended Text:
Differential Equations and Linear Algebra

Course Outline:
Matrix algebra and general properties of matrices, elementary row operations, reduction of matrices into echelon and reduced echelon form, rank of a matrix, determinants and their properties, solution of system of linear algebraic equations, Gaussian elimination and Gauss-Jordan method, vector spaces, linear dependent and independent vectors, basis, eigenvalue and eigenvectors, first and second differential equations and their solution techniques, higher order linear differential equations, applications of differential equations, power series solutions and systems of linear differential equations.

Recommended Text:

Numerical Analysis

Course Outline:
Error and computer arithmetic, root-finding for non-linear equations, interpolation and polynomial approximation, solution of system of linear equations, numerical differentiation and integration and numerical solution of ordinary differential equations.

Recommended Text:
Engineering Statistics

Course Outline:
Review of set algebra and combinatorial analysis, sample space and events, axiomatic definition of probability, rules of calculation of probabilities, conditional probability and probability of the composite random events, independent experiments, discrete and continuous random variables, binomial, Poisson, multinomial, exponential and normal distribution, data analysis and descriptive statistics, introduction to inferential statistics, point estimation, methods of moments and methods of maximum likelihood, confidence intervals, tests of hypothesis, first and second types of errors, tests for mean, proportion and variance, chi-square and student's t-test.

Recommended Text:
Computer Systems and Programming

Course Outline:

Recommended Text:
Electrical Engineering

Course Outline:

Recommended Text:

Electronics Engineering

Course Outline:

Recommended Text:
1. Robert Boylestad and Louis Nashelsky, “Electronic Devices and
